Summer Internship

1. I do predict the percentage of marks that a student is expected to score based upon the number of hours they studied. This is a simple linear regression task as it involves just two variables.
2. I have to do unsupervised learning From the given 'Iris' dataset, and predict the optimum number of clusters and represent it visually.
3. I have to create the Decision Tree classifier and visualize it graphically. The purpose is if we feed any new data to this classifier, it would be able to predict the right class accordingly.
4. I have to explore Business Analytics by using Tableau.
